New polynucleotides encoding antigenic HIV Type C polypeptides, useful in applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy. 

Claim 1; Fig 9; 233pp; English.

The present invention describes expression cassettes comprising a polymuclectide sequence encoding a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gay, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (1).

(1) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation, generation of perception of perception of perception of perception of perception of perception of perceptions. The polymucleotides are particularly useful in gene

The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                <u>ассетваасттесесателентелентелентелентелендестваленте</u>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           780
                                                              The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polyneptide including an HIV Gag. Int, Nef, plSnasseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is subcuttaneously, intramucosally, intramucosally, intradermally, transdermally, intravaginally, intravectally, orally or intravenously. The expression cassette is useful polymeptides. This polymotleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

The present invention describes expression cassettes comprising a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprises any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (T). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV type C proteins. The polymucleotides are particularly useful in gene therapy and DNA immunisation applications. Particularly useful in gene therapy and DNA immunisation applications. Particularly useful in gene therapy and DNA immunisation applications. ABBL39942 to ABBL40054 and
              New polynucleotides encoding antigenic HIV Type C polypeptides, useful in applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACCUGBACTICCCCATCAGCCCCATCGAGACCGTGCCCGTGAAGCTGAAGCTCGAGCATG 720

Van Rensburg EJ

The present invention describes expression cassettes comprising a polypucleotide sequence encoding a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV Type C proteins. The polymucleotides are particularly useful in gene Therapy and DNA immunisation applications. ABL39942 to ABB40054 and ABB06204 to ABB06215 represent sequences used in the exemplification of the present invention New polynucleotides encoding antigenic HIV Type C polypeptides, useful applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy. Claim 1; Fig 10; 233pp; English.

The invention describes a synthetic polymucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polymorleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polymucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polymucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
New synthetic polymucleotides encoding antigenic HIV type B and/or type C polymeptides, useful as immunogenic compositions or vaccines for generating humoral or ceilular immune responses against HIV in a subject, especially humans.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GAGCTGCAGGTGCGCGGCGACAACCCCCGCAGCGAGGCCCGGCCCGAGCGCCCAGGGCACC 366
                                                                                                                                                                                                                                                                                                                        The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HIV Gag, Int, Nef, pl5maseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscully, intranscally, intradermally, transdermally, intravadinally, intravactully, orally or intravenously. The expression casette is useful for immunisation, generating packaging cell lines and producing HIV polymetides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CAGATCAAGGAGGCCCTGCTGGACACCGGCGCCGACGACACCGTGCTGGAGGAGATGAGC 486

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a synthetic polynuclectide encoding 2 or more immunogenic HVV polypeptides, where at least 2 of the polypeptides are derived from different HVV subtypes. The polynuclectide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynuclectide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynuclectide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polymeptide including an HIV Gag, Ent. Nef., pl5RnaseH, Pol, Tat, Prot, or Rev polymeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscularly, intranscally, intranscally, intraveginally, intrarectally, orally or intravenously. The expression cassette is useful for immunisation, generating packaging call lines and producing HIV polypeptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polymptide including an HIV Gag. Int, Nef, plSmaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramucosally, intransally, subcutaneously, intradermally, transdermally, intravaginally, intravectally, orally or intravenously. The expression cassette is useful for immunisation, generating packaging cell lines and producing HIV polymetides. This polymorlectide sequence represents the DNA of an HIV Type C related sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  193

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        193
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag. Int, Nef, plSnasseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV Uype C by gene therapy or used in the development of a vaccine. The gene delivery vector is subcutaneously, intradermally, intranueosally, intransally, intraversally, intraversally, intraversally, intraversally, intraversally, intraversally por intravenously. The expression cassette is useful for immunisation, generating packaging call lines and producing HIV polypeptides. This polymotheotide sequence represents the DNA of an HIV Type C related sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          253

The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HIV Gag. Env. Int. Nef. plsnaseH. Pol. Tat. Prot. or Rev Polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramucoularly, intramucosally, intranasally, subcutaneously, intradermally, transdermally, intraveginally, intraveginally, intraveginally, intraveginally, polymuciacion, generating packaging call lines and producing HIV polymetides. This polymuciacide sequence represents the DNA of an HIV Type C related sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       74 AGGGCCCCAAGCGCATCAAGTGCTTCAACTGCGGCAAGGAGGGCCACATCGCCCGCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a synthetic polymucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polymucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polymucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polymucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14 TGGCCGAGGCCAGGCCACCAGGCCAACATCCTGATGCAGCGCAGCAACTTCA 73

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3821
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤

The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HIV Gag, Env. Int, Nef, plStnaseH, Pol, Tat, Prot, or Rev Polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is subcutaneously, intradermally, intravaginally, subcutaneously, intravaginally, intravesting packaging cll lines and producing HIV polympetides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New expression cassette comprising a polynucleotide sequence encoding polypeptide including an HIV Gag, Bnv, Int, Nef, pl5RnaseH, Pol, Tat, Prot, or Rev polypeptide, useful for immunization, or generating packaging cell lines.

The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is subcutaneously, intramescally, intranscally, intranscally, intraversion cassette is useful for immunisation, generating packaging call lines and producing HIV polymetices. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.
